Course Questions:

Think about the activities in this course that were most valuable to your learning. Describe how these experiences contributed to your learning. Be specific and give concrete examples.

Comments
The course covered very useful materials such as probability, financial calculations, functions, sets, and many others. Weekly quizzes were very useful in terms of gauging my understanding as a student. Overall, the course was very crucial as it related mostly to the real world.
She is the first teacher to have ever supported my needs and the way I learn, she truly cares about her students and making them understand successfully.
Some activities that were the most beneficial to my learning were the in-class examples the professor would do with the entire class and call on students for participation and to make sure we all understood the material. They did this for every lesson which helped me better understand the material.
The lectures have been very helpful to break down the material to an understandable level.
the inclass activities and group work were the most beneficial, a long with going over the various forms of written communication between classmates.
The teacher always has a good balance of instruction, lectures, and practice. As well all the resources she provided for us were super helpful in the course because it allowed us to get even more practice and instruction if we wanted. One of the most helpful things is the real-world connections she makes to the lessons which paint things in a more useful and easier picture.

Describe how learning activities in the course might be adapted or modified in a manner that meets your learning needs. Be sure that your suggestions are constructive and specific; general feedback will not provide your instructor with the information needed to improve the course.

Comments
I did not find any areas in the course that required modifications. The course was well organized and thus met my learning needs.
She was extremely helpful and supportive!
I wouldn't have students come up to the board to put their answers up this makes me feel like I'm in high school again and I was not too fond of it and I feel like it wasted time waiting for someone brave enough to shout it out or write it wasting valuable class time.
No changes suggested, I was very pleased with the course.
I work in a business environment so everything that was taught in the classroom will translate out into my professional life.
I believe that she did very well accommodating us to our learning needs in the best manner possible for each individual.

What did you do in this course to promote your own learning?

Comments
I read every chapter in the book and repeatedly did assignments.
Studying habits
Having assignments for homework and requires us to use excel for our lessons in math which helped me develop my computer skills and math skills simultaneously.
I hired my own tutor.
I constantly talked to people about their work and what they were learning.
I used the extra resources like open math to continue practicing and doing practice quizzes, it helped me truly cement everything into my brain. The environment of the class is also one that is friendly and welcoming so often I arrive to class an hour early and study with other students where we go over notes and any questions we have to ask her.

Using the following scale, please rate your recommendation of this course to other students whose academic preparation and program are like yours:

Not Recommended	Neither Recommend Nor Discourage	Recommend	Recommend Strongly	Resp
0%	0%	0%	100%	6

Would you recommend this course to other students whose academic preparation and program are similar to yours? Why or why not?

Comments
Yes. This is not just a math class. It covers topics such as financial calculations which can be helpful in life.
ABSOLUTLEY
I would recommend the teacher as this is my second time taking this class and her teaching style helped me understand the material much better than I did originally.
I would highly recommend any fellow students taking this particular course with this particular, Professor. She's awesome
Yes I would, it is important and a great tool to help learn some new skills for business and how to be more professional and efficient.
I would strongly recommend it because I find myself actually thinking and using the concepts she has taught us in class, I'll look at the things we learn and actually understand them. Recently, I found myself looking at a graph showing profits and marginal prices and I had a wow moment when I realized I could now understand what the things I was looking at meant.

About the instructor:

Not Recommend	Neither Recommend Nor Discourage	Recommend	Recommend Strongly	Resp
0%	0%	0%	100%	6

Would you recommend this instructor to other students? Why or why not? Please be specific and constructive.

Comments
The instructor is very organized, explains course content clearly which makes it easy to understand, and gives timely feedback.
She goes ABOVE and BEYOND for students and really makes a FULL effort to help them including me!
yes, she was one of the kindest people I have ever met in my life. She truly cares about all of her students and wants only the best for them. She helped everyone who needed it and let people stay later than the class was scheduled for if they needed a little extra time.
I would again recommend this instructor to any other fellow students taking this course. She done an excellent job explaining the assignments every week.
Yes I would, the instructor greatly cared for both the material and the students, communication was very thorough and quick, the assignments were interesting and not difficult.
I would recommend her to other students because I truly believe she is one of those math teachers that can help you get to that moment in your life where you just understand math especially because I myself wasn't the biggest math person and it was never my strong suit. She starts with cementing the basics and moving up at a followable and understandable pace, she also doesn't beat around the bush and presents you with what you need and what it means. Her way of connecting real-life scenarios to the math we are learning has been one of the most useful things for me personally and I feel it would be for others as well. For anyone who is afraid of math or wants to truly understand it, I would certainly recommend her and I would take all my math courses with her if possible.
